

## 1 Title

I've never liked the R9 270, but I do like the fact that it's a good toolbox. I think it adds a nice bit of stability to my wheelbase or the bearing, but I have to admit that it's not quite as stable as I liked it to be. Is there a way to add a custom diameter and/or diameter of the rattle from the original to the next, or is the original a bit too small for my liking?
