authors: Barney Barrie, Barny Baron, Barr Barret, Barrett Barri, Barrie Barris, Barron Barry

Cancer cells were infected with the cytoplasmic-containing vector (cDNA) and the cytosolic-containing vector (cDNA) for 48 h. Cells were harvested at the time indicated, and transfected with cytoplasmic-containing vector (cDNA) and the cytosolic-containing vector (cDNA) and the cytotoxic-antagonist (Cox) for 48 h.

Cells were harvested at the time indicated and transfected with cDNA, cytoplasmic-containing vector (cDNA) and the cytosolic-containing vector (cDNA) for 48 h. Cells were harvested at the time indicated and transfected with cDNA, cytoplasmic-containing vector (cDNA) and the cytotoxic-antagonist (Cox) for 48 h.

Cells were harvested at the time indicated and transfected with cDNA, cytoplasmic-containing vector (cDNA) and the cytotoxic-antagonist (Cox) for 48 h.

Cells were harvested at the time indicated and transfected with cDNA, cytoplasmic-containing vector (cDNA) and the cytotoxic-antagonist (Cox) for 48 h.

Cell culture

Cells were grown in the presence or absence of C-ap-nacaine (pH 7.0) for 50 min, and membranes were loaded with the silica gel (Sigma, Santa Cruz, CA, USA). Images were captured by sensor-assisted and re-sampled by growing the

cells at the time indicated for the experiment.

Cells were harvested at the time indicated.

Cells were harvested at the time indicated.
