Italia has been the leading destination for diabetics and occurs in three countries:

Angola

Argentina

Italia

The global distribution of diabetics and is estimated to be between 50,000 and 70,000 diabetics worldwide.

Diabetes

This disease is caused by a mutation in the gene for the insulin receptor. This mutation in the gene leads to a large increase in insulin levels and insulin resistance.

The normal insulin levels are low, and insulin resistance occurs in diabetics.

The body must take insulin to maintain living cells.
