Construction of a large-scale out-of-hospital cardiac arrest network to provide a high-quality, stable, and necessary treatment for all patients with cardiac arrest is a top priority for the United States Department of Health and Human Services. To this end, the Center for Excellence in Cardiology (CECRI) has developed the CECRI Planner, a comprehensive network of cardiac arrest networks to provide a high-risk, low-reward, and stable care for patients with cardiac arrest.

The CECRI Planner is a comprehensive, high-quality, high-risk, low-reward care system designed to provide a high-quality, stable, and necessary treatment for all patients with cardiac arrest, a top priority for the United States Department of Health and Human Services (HHS).

The CECRI Planner is a comprehensive, high-quality, high-risk, low-reward care system designed to provide a high-quality, stable, and necessary treatment for all patients with cardiac arrest, a top priority for the United States Department of Health and Human Services (HHS).

The CECRI Planner provides a comprehensive, high-quality, high-risk, low-reward care system to provide a high-quality, stable, and necessary treatment for all patients with cardiac arrest.
