A man who was killed and injured in a car crash in the northern Italian city of Lampedusa has been identified as a 31-year-old man who was injured in a car crash.

The man, identified as Giuseppe Pozzi, died at the scene at the scene of the crash, according to local media.

His death is the first in the region to be caused by an accident, after a car accident in the vicinity of the city of Siena in March.

The passenger in the car, a 43-year-old man from Lampedusa, was killed, as a result of his injury, local media reported.

An investigation was carried out by the police, who discovered Pozzi's vehicle was uninjured at the scene.

The driver of the car was identified as Luigi Varela, a 31-year-old physiotherapist from Lampedusa.

He was killed in the crash.

The CACTA has confirmed that the man who was killed was a 31-year-old man, and that he was killed in the car.

It is not known who was responsible for the car crash.

Lampedusa Mayor Marcello Galli was quick to express his shock over the death of Pozzi, stating that the man was involved in a car-related accident.

"It is very disappointing that he was killed in a car accident in the city of Lampedusa," Galli said. "His death was caused by an accident.

"His death was a severe loss to the city. His family will always be grateful to the Lampedusa Council for their support and their support during this difficult time.

"As the car was brought down by two people, the car-related accident and the car-related death of the man, we will always try to be as fast as possible on this particular day for Lampedusa."

The investigation into the death of Pozzi will take place at the local level.

The Italian media reported that the man was a naturalized European citizen and that he had been studying to become a medical doctor.

The man, who is known for his work on the field of neurostimulation therapy, had been working on a project with the Centre for Neurostimulation of Immune Cell Response, where he had been working for several years.

In 2007 he had started work as a physiotherapist for a family company in a northern Italian city. He had frequently been on the receiving end of various neurostimulation therapies, including the GI tract stimulation, the treatment of neurovascular diseases by vascularized tissue, and the R-stimulation neuromuscular model.

His work had also been reported in the media.

The body of the man was found in a field in Lampedusa on February 14, 2014.

The man and a number of other family members have been identified, including his wife, his two daughters, and three other relatives.

His family has also been described as a family with a high level of respect for their family members.

On February 28, 2014, the CACTA released the following statement on the death of the man: "We are currently investigating the incident and are in the process of identifying the cause of the death. "It is our understanding that the man was a neurostimulator user, a member of a group that was working on a project of the Centre for Neurostimulation of Immune Cell Response, whose members were working at a family and local level. "He was working on a project of the Centre for Neurostimulation of Immune Cell Response, which was based on the GI tract stimulation and the R-stimulation neuromuscular model. "He was working on the project in a field in which he had been working for several years. Our hearts are with his family and the rest of the family. "His family will always be grateful to the Lampedusa Council for their support and their support during this difficult time. "His death will be felt by all of the Lampedusa families. "Our thoughts are with the family and all the Lampedusa families at this time."

The Lampedusa Council, in its statement, called on Lampedusa Council to respect the privacy of the individual who was killed.

The Lampedusa Council has also released a report on the death of a man from the city of Lampedusa.

The man was found to be in good health, with a large pulse and a pulse of fresh blood. He was pronounced dead at the scene.

The man, a member of a group that was working on a project of the Centre for Neurostimulation of Immune Cell Response, was a member of the group that was working on a project of the Centre for Neurostimulation of Immune Cell Response.

He had been working on a project
